Cloud architect / Infrastructure engineer / DevSecOps specialist (fintech + healthtech)

WORK EXPERIENCE

Bluesquare

Dec. 2025 – now

DevSecOps/Infrastructure Engineer

Brussels, BE

- bluesquarehub.com is a global tech company that builds data tools that help orgs in low and middle-income countries turn health data into better decisions.
- *Cloud infrastructure administration, team management*
 - Re-architected a core SaaS offering (DHIS2) to reduce deploy time from days/weeks into minutes
 - Cut analytics generation time 5-6x for large SaaS instances, from hours to minutes.
 - Migrated production instances of an in-house application to newer infrastructure with zero downtime.
- *Improving company's cybersecurity posture*
 - Ongoing: Leading the ISO/IEC 27001 Certification effort across the company

Incredible

Mar. 2024 – Nov. 2025

CTO, Tech Lead, DevOps/Infrastructure Engineer

Remote (London, UK)

- getincredible.com (Techstars 2022) is a UK based B2C debt management app used by thousands
- *Cloud infrastructure administration, application development, team management*
 - Refactored the infrastructure and reduced cloud expenditure by 70% (measured in previous 6 months)
 - Integrated an Open Banking provider that increased the credit card coverage in the UK to >95%
 - Reduced the backend application lead time (commit to production) from weeks/months to minutes

Lean

Nov. 2019 – Apr 2024

Founding / Staff DevOps Engineer

London, UK

- leantech.me is the leading open banking provider in the Middle East and North Africa. First company hire
- *Critical cloud infrastructure management* using Infrastructure-as-Code (Terraform).
 - Managed at least 8 cloud infrastructure migrations that could have impacted 250,000+ users, all with an aggregate of 0 unplanned downtime.
 - Maintained >99.9% uptime SLA of Data & Payment APIs in the UAE and KSA for over 2 years (2021 - 2023)
- *Automation of infrastructure services*, using GitOps (ArgoCD), such as Redis, Vault, Kafka, MongoDB, Nginx. This created an environment where engineers could self-serve their infrastructure requests
 - Removed internal requests (at least 5 a week) to the DevOps engineers to manually modify the infrastructure (database creation / r+w access) by creating a security-compliant solution (SSO + approvals + audit trails)
- *Security infrastructure setup and administration*, such as a PKI setup for mTLS Authentication or a company-wide SIEM/XDR
 - Participated in several high-profile security audits that helped certify the company ISO/IEC 27001
